

Electrotechnics

Our services

First, if it is unavailable, we establish the requirements list and / or the technical specifications based on your request.

Then, our engineering department will be able to conceive and to realise the electrotechnics development, as well as the automation and the starting.

The steps that we propose to you in order to elaborate the technical documents and to realise your project are the following ones:

- Make a decision about the system architecture and about the material choices.
- Conceive and draw the electric schemes.
- Elaborate the bill of material.
- Furnish the material.
- Proceed to the electric panels' assembly and the wiring.
- Machinery wiring.
- Realizing the PLC and the man-machine interfaces' softwares.
- Start up and commissioning of the machinery.
- Constitute the technical documentation and the instruction manual.

You can of course ask for our services for mandates requiring only one or some of your project stages.

Don't hesitate to contact us for a visit or for an offer. We will be pleased to study your request in full confidentiality and without any commitment from you.
