

Mechanics

Our services

First, if it is unavailable, we establish the requirements list and / or the technical specifications based on your request.

Then, our engineering department will be able to conceive the principles, to make the plans, to realise the machine and the starting.

The steps that we propose to you in order to elaborate the technical documents and to realise your project are the following ones:

- Make the technological choices about the future machine.
- · Make a pre-study drawing.
- Present and validate the pre-study before establishing the detailed plans.
- Draw the overall mechanic plans, the subset plans and the detailed plans.
- Elaborate the material lists.
- Order all the material.
- Execute the assembly of the machine and the starting.
- Constitute the technical documentation and the instruction manual.

You can of course ask for our services for mandates requiring only one or some of your project stages..

Don't hesitate to contact us for a visit or for an offer. We will be pleased to study your request in full confidentiality and without any commitment from you.
